

ESET NOD32 Antivirus 4 Business Edition for Mac OS X

Endpoint antivirus protection

Combining powerful management tools, ease of use for end users, impressive performance and state-of-the-art proactive threat detection, ESET NOD32® Antivirus is the most effective way to protect your business's valuable data assets while ensuring regulatory compliance.

Management console — Antivirus — Antispyware

ESET NOD32 Antivirus 4 Business Edition for Mac OS X

FACT: While Macs are subject to fewer viruses or other malware attacks than Windows, these attacks do exist and are increasing in frequency.

FACT: Criminals know this, and are flooding the Internet with over 200,000 new malware variants a day, seeking any weakness in your environment to exploit. Some attacks target only a few users or specific operating systems, making them very hard to identify using traditional antivirus technologies.

FACT: Over 100 million users worldwide trust ESET's advanced heuristics technology—ThreatSense®—to proactively defend against stealthy attacks.

FACT: Most compliance regulations require security protection on all endpoints.

ESET NOD32 Antivirus is the most effective protection against today's huge volumes of malware threats. ESET provides award-winning proactive antivirus and antispysware protection without affecting your workstation's performance, while offering business-grade management control via our Remote Administrator console.

Using advanced ThreatSense technology, ESET NOD32 Antivirus proactively protects you from new attacks, even during the critical first hours of a malware outbreak when other vendors' products aren't aware the attack even exists. ESET NOD32 Antivirus detects and disables both known and unknown viruses, trojans, worms, adware, spyware and other data-stealing threats.

ESET NOD32 Antivirus is one of the fastest antivirus solutions, so fast your users won't even notice it running. In fact, if you're replacing an existing antivirus product, users will likely notice their applications are running faster. It is also speedy enough to scan all your files during a system scan without a heavy CPU load (<10% on most systems), so you won't sacrifice productivity for security.

For your IT and security teams, it's easy to run reports and manage configurations, policies and updates. For end users, it is unobtrusive and highly effective, so you'll see fewer help desk calls for virus outbreaks, or complaints about system scans causing slowdowns.

Whether you manage a mix of Mac and Windows endpoints, or have a growing Mac-based business, you'll spend less time worrying about antivirus, compliance requirements, and on help desk calls to clean compromised systems, with ESET NOD32 Antivirus protecting your endpoints.

KEY BENEFITS

Protection from the unknown

Award-winning ThreatSense technology uses multiple layers of threat detection to deliver the most effective protection possible against viruses, worms and other data and identity-stealing malware. It is so smart and proactive that it stops most new attacks even before signatures are available, while carefully balancing accurate detection against speed and minimizing false positives. NOD32 can also be configured to scan deeply into multiple levels of compressed files, even Time Machine archives, to root out hidden malware.

Built for speed

ESET NOD32 Antivirus is fast and light so your Mac users won't even notice it is there. Even disk-intensive operations like performing a "full disk scan" run smoothly. Now you no longer have to trade off security for productivity.

Easy on end users

It is easy to configure ESET NOD32 Antivirus to run quietly and unobtrusively on the endpoint. And "full screen mode" ensures that users aren't interrupted with alerts during inopportune times, such as presentations or video editing. Your users will receive the best possible proactive detection against malware, without enduring excessive system slowdowns and alerts, reboots or annoying false positives. This means fewer support calls from end users, which will brighten your help desk manager's day.

Easy to manage

Empower your IT team to spend more time focused on enabling business productivity, and less time on managing antivirus and meeting compliance. ESET Remote Administrator provides a single management console to control your entire network — supporting tens or thousands of heterogeneous endpoints, whether they are running Windows, Mac, Linux or mobile OSes. Configuration, updates, alerts and other tasks are all easily managed from these intuitive screens.

Easy on IT budget

ESET NOD32 Antivirus is so fast and light, upgrading your existing antivirus to NOD32 can make even your Mac run noticeably faster.

Smart updates

It is a breeze to stay current with the most up-to-date protection with our timely and compact malware signature and heuristic updates. The software automatically brings you the latest in detection straight from the ESET Virus Lab.

Removable media security

Use of shared conveniences such as USB thumb drives, Firewire drives, CDs and DVDs is an easy way to spread infected files. ESET NOD32 Antivirus scans files on removable media, whether they are from Mac or Windows, before they can do any harm to your system. Administrators also have the ability to block access to removable media entirely to minimize risk of data theft.

Security settings control

Define exactly which users have permissions to modify ESET NOD32 Antivirus settings and be confident that unauthorized users will not disable or degrade the level of security on your Macs.

Universal installer package

Administrators can easily deploy our standard installer package with their favorite software distribution tools like Apple Remote Desktop and LANDesk Management Suite.

System requirements

Processors supported	32-bit x86 or 64-bit x64, Intel®
Operating systems	MAC OS X 10.5.X (Leopard) MAC OS X 10.6.X (Snow Leopard)
Memory	130 MB
Disk space (download)	39 MB
Disk space (installation)	100 MB
